# Outline

Welcome to the Clarivate EndNote X8.2 introduction. This document provides a common reference management framework for all academic researchers and normal students.

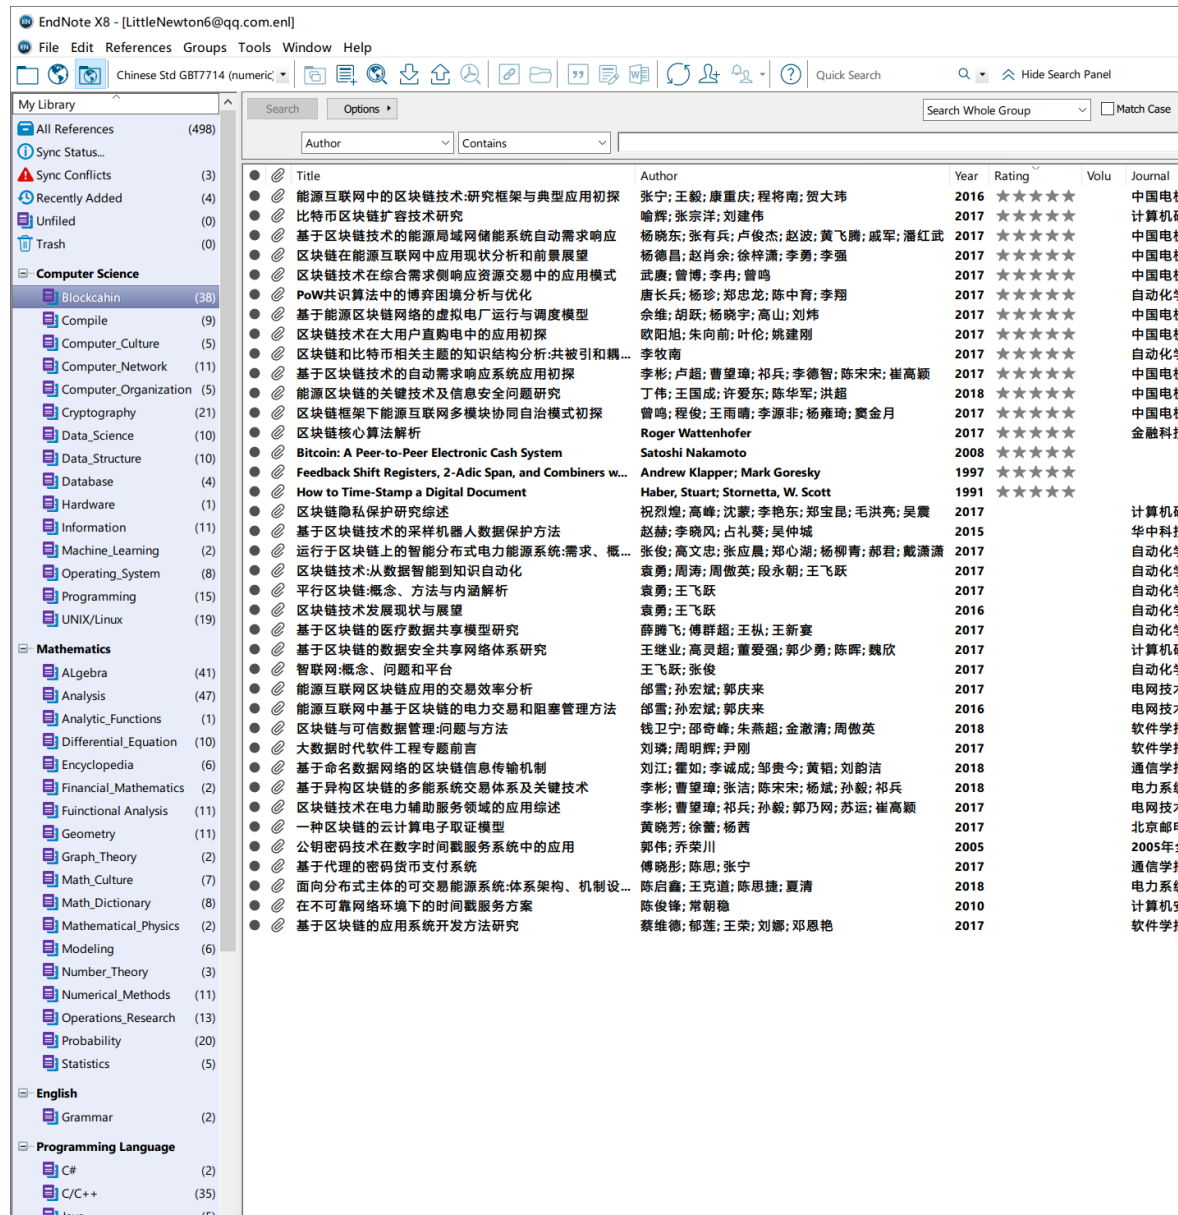

Here is what we want to tell you about EndNote X8. EndNote X9 has been released for a month, we did not get the authority version, so we only introduce X8 version. Please searching the user manuals for more details.

Research on the Application of Blockchain in the Integrated  
Demand Response Resource Transaction

WU Geng, ZENG Bo, LI Ran, ZENG Ming

(State Key Laboratory for Alternate Electrical Power System With Renewable Energy Sources/North China Electric Power  
University), Changping District, Beijing 102206, China)

ABSTRACT: Under the background of energy internet and decentralized energy market, the traditional demand response will develop into integrated demand response. As the decentralized and distributed accounting mode, the blockchain can support the IDR resource transaction in the decentralized energy market, and promote the implementation and development of IDR resource by the market mechanism. The concept of IDR was introduced and the characteristics was analyzed firstly in this paper. Then corresponding to the issues of the DR transaction in the current market, the blockchain-based IDR transaction frame was proposed. Finally, several key problems was analyzed in the blockchain-based and distributed IDR transaction.

KEY WORDS: energy internet; blockchain; distributed energy market; integrated demand response

摘要: 在未来能源互联网以及分散能量市场的条件下, 传统的电力需求侧响应(demand response, DR)将向着综合需求侧响应(integrated demand response, IDR)的方向发展。作为一种去中心化的分布式记账模式, 区块链技术能够为 IDR 资源在分散电力市场中的交易提供相应的技术平台, 进而通过市场交易促进 IDR 的实施和发展。该文从 IDR 的基本概念入手, 分析了可交易 IDR 资源的基本特征, 进而针对现有 DR 资源参与市场交易中存在的问题, 提出了基于区块链技术的 IDR 资源交易整体框架; 最后, 基于上述的整体交易框架, 分析了基于区块链技术的 IDR 市场交易中的关键问题。

关键词: 能源互联网; 区块链; 分散能量市场; 综合需求侧响应

0 引言

当前, 大数据和互联网技术的快速发展正在推动着整个社会形态和基础设施的改变。在这种扁平化的社会结构中, 消费者、企业、政府或者监管机构之间的边界越来越模糊, 所有节点能够通过扁平化的系统网络结构了解系统实际的运行情况, 也能够影响系统的运行和发展过程<sup>[1-2]</sup>。互联网的自治系统要求未来的系统控制结构能够实施捕捉不同情景下的特征数据, 并且将观测数据引入到系统运行模型中, 从而自动匹配相应的供给和需求, 满足不同类型的用户需求<sup>[3]</sup>。

作为一种分布式记账系统, 区块链所具有的高可靠性和去中心化的特征, 使其能够很好地适应这种分散化的系统结构<sup>[4]</sup>。基于区块链技术所构建的共享经济生态环境, 能够促进分散化系统的发展和趋优。通过数据加密、时间戳、智能合约等技术手段, 实现了在没有第三方信任背书的情况下, 无信任节点间去中心化的点对点交易<sup>[5]</sup>。区块链技术的引入能够降低交易系统的准入门槛, 同时保证资产交易记录的透明和快速查阅<sup>[6]</sup>。区块链技术在比特币系统中的成功应用, 也使得人们对这种去中心化的交易系统更为广泛的应用进行了更多的尝试和

展望, Ascribe 将区块链技术引入到对于网络知识产权和实体资产的认证和保护中, 使得这些电子知识产权能够始终与其所有者建立联系, 保证所有权永久可认证和可追踪<sup>[7]</sup>。Blockchain 则是利用区块链技术对奢侈品鉴定结果以及对维修过程进行记录保存<sup>[8]</sup>。

随着分布式可再生能源、储能、电动汽车的接入以及智能家居的推广, 生产消费者的出现使得当前电力系统中的供需界限逐渐模糊, 当前电力系统的运行和管理模式已无法满足各类型能量单元“即插即用”的接入模式<sup>[9]</sup>。能源互联网概念的提出, 为实现末端能量单元的无差别接入和分散能量交易提供了相应的技术支撑平台。DR 作为未来生产消费者中重要的可控资源, 是实现系统供需协同互动、提高末端用户与系统交互水平、保证用户与市场、天然气市场、碳市场等多类型能源市场价格

度, 促进 DR 在未来能源互联网中应用。

本文将从能源互联网背景下需求侧响应的发展趋势入手, 结合当前需求侧响应参与市场交易过程中存在的问题以及区块链的相关特征, 提出一种基于区块链技术的综合需求侧响应资源交易框架。最后, 分析了基于区块链技术的分散需求侧响应资源交易中的关键问题, 以期为下阶段区块链在分散能量市场中的应用提供相应的参考。

1 IDR 及其特征分析

1.1 IDR 的基本概念

在能源互联网背景下, 多能源互联系统的构建以及多能源市场的建立, 使得现有的 DR 模式将逐步改变, 传统 DR 将逐渐向 IDR 方向发展<sup>[11-12]</sup>。IDR 是用户基于系统末端的多能源源侧设备以及电力市场、天然气市场、碳市场等多类型能源市场价格

# What EndNote can do

## Several annoying statements

In these situations, you may feel very annoyed for the software is not so smart. Do they really NOT SMART, or just you don't know how to use them?

- **Writing Microsoft Word files**
  - if I want to insert a new citation between two old ones
  - if I want to delete a citation which has already exist in the paper
  - if I want to change the citation style
  - if the citation needed to be edited and updated
  - Oh my God...
- **Manage the references**
  - There are so many independent PDFs in my file system
  - I am going to write a new paper but I still need to cite several references which have been used in an old paper, should I need to reinput them?
  - Now I don't know what these paper mainly talk about because I don't want to open them to read the abstract one by one

# What EndNote can do

- Manage your reference Library
- Work together with Microsoft Word or LaTeX to insert and manage citations
- Share your library to your friends or tutor

# Three User Mode

- Local Library Mode
- Online Search Mode (Temporary Library)
- Integrated Library and Online Search Mode

User Mode is a specific mode to control this software. Different mode has different highlights, but sometimes they look the same.

EndNote X8 provides three typical user modes which are usually used during writing and searching.

**Local Library Mode**, the most frequently used user mode. It is based on a local library folder and a **.enl** file and both the two has the same name

**Online Search Mode** (Temporary Library), in this mode, you can search the references you needed with several keywords, such as the Author Name, Year, Journal, etc. The searching result can be imported into this Temporary Library, which means after you restarting EndNote, this library would be empty automatically. Remember to store the research result before closing EndNote.

**Integrated Library and Online Search Mode:** Local Library Mode addition with an online search mode.
